A recent development in inhaler technology has been the development of low-velocity sprays known as soft mist inhalers. These devices represent a new class of multidose inhaler devices and contain liquid formulations similar to those in nebulizers.

The growing incidence of chronic respiratory diseases, including asthma and COPD, along with the need for more effective inhalation delivery methods, is predicted to drive a fast growth in the global soft mist inhaler (Respimat, SMI) market in the following years. Growing demand for economically cost solutions and growing awareness of its advantages are expected to drive the SMI technology sector. Another factor predicted to boost market expansion is the launch of state-of-the-art and creative SMI products that provide patients with more comfort and convenience. For instance, by 2022, 11.7 million Americans, or 4.6% of the US population, will have chronic bronchitis, emphysema, or chronic obstructive lung disease.
