Dry suits are the most commonly used wetsuits. They are made of foamed synthetic rubber. The general thickness can range from 3mm to 10mm. The infiltrated cold water is isolated by the clothes and will not penetrate out again. It is rapidly heated by body heat conduction. The isolation of inactive air bubbles can prevent the loss of body heat, and a well-fitting wetsuit can reduce the flow and exchange of internal and external water as much as possible, and the isolation effect is better.
