Dual Chamber IV Bag is a special kind of IV bag that has two separate interior chambers. This unique design allows the dual chamber IV bag to store different parts of a formula separately, separated by a central divider, until they are ready to mix, activate, and use.

Dual chamber IV bags are used in particular circumstances with drugs and formulas that are best-kept separate before use. They usually feature a powdered form of a drug in the base chamber, with a liquid solution in the top chamber. When it's time to use the bag, the central divider of the dual chamber IV bag is removed, mixing the two formulas so that they're ready for administration.

Dual chamber IV bags have various specific uses and are an important piece of infusion equipment, helping in the treatment of many patients on a daily basis.
