## Abstracts

According to our (Global Info Research) latest study, the global Dual-slot Card Edge Connectors market size was valued at US\$ 975 million in 2024 and is forecast to a readjusted size of USD 1417 million by 2031 with a CAGR of 5.5% during review period.

Dual-slot Card Edge Connectors are a type of board-to-board connectors designed to connect printed circuit boards (PCBs) with two slots or channels. These connectors have two sets of metal contacts corresponding to the two slots. When the edges of the PCBs, usually with gold fingers, are inserted into the two slots of the connector respectively, the metal contacts in the connector will establish reliable electrical connections with the conductive traces on the edges of the PCBs. This enables the transmission of electrical signals and power between the PCBs, facilitating communication and interaction between different circuit boards or components in electronic devices. Dual-slot card edge connectors are widely used in various electronic equipment, such as computers, servers, communication devices and industrial control systems, etc., providing a convenient, reliable and high-performance connection solution.
