According to our (Global Info Research) latest study, the global E-Commerce Security Awareness Training Solutions market size was valued at US\$ 542 million in 2025 and is forecast to a readjusted size of US\$ 774 million by 2032 with a CAGR of 5.3% during review period.

The e-commerce security awareness training solution imparts cybersecurity knowledge, skills and practical experience to e-commerce enterprises and their employees through systematic training activities, so as to enhance their ability to identify and respond to security risks such as cyber attacks and data leaks. This solution aims to build a safer and more reliable e-commerce environment and protect the legitimate rights and interests of enterprises and consumers.

Through theoretical teaching, case studies, and simulation exercises, we enhance employees' awareness and response capabilities in areas such as cybersecurity, data protection, and compliance operations. We build a security protection mechanism covering the entire transaction process, reducing business risks caused by human negligence or malicious attacks, and ensuring the security of customer data and funds. The industry gross profit margin is approximately 30-55%.

Market drivers mainly include the following:

Policy compliance and strengthened industry regulation: Global e-commerce regulatory agencies are continuously upgrading regulations on data security and customer privacy protection, such as China's Personal Information Protection Law and the EU's GDPR, forcing companies to meet compliance requirements through training. Regulatory

departments are promoting 'special rectification of e-commerce safety production,' explicitly requiring that safety training be incorporated into the employee assessment system, forming a virtuous cycle of 'policy-driven - enterprise response - market expansion.'

Technological iteration and evolution of risk patterns: Digital transformation accelerates the onlineization of e-commerce businesses, but risks such as cyberattacks (e.g., DDoS, phishing scams) and internal data breaches are surging. With the application of AI technology in intelligent recommendation and risk control, algorithmic bias and model vulnerabilities have become new risk points, driving the upgrade of training content from 'basic security' to 'intelligent risk prevention and control,' creating demand for high-end solutions.

Increased business needs and user awareness: E-commerce companies have higher requirements for business continuity and need to reduce risks such as claims disputes caused by operational errors and business interruptions caused by system failures through training; consumers are becoming more sensitive to data security, forcing companies to strengthen employees' compliance awareness and maintain brand reputation; the penetration of emerging fields (such as live e-commerce and cross-border e-commerce) creates a dual demand of 'upgrading traditional business + expanding into new scenarios', which will support the industry's long-term growth.
