According to our (Global Info Research) latest study, the global Eco-friendly Coating Resins market size was valued at US\$ 2058 million in 2025 and is forecast to a readjusted size of US\$ 2886 million by 2032 with a CAGR of 4.9% during review period.

Eco-friendly Coating Resins refer to a class of high-performance synthetic resins designed to minimize environmental impact and health hazards during their synthesis, formulation, and film-forming processes. These resins are characterized by low VOC (Volatile Organic Compound) emissions, low toxicity, high resource efficiency, or biodegradability. The primary technical pathways include waterborne resins using water as a medium, solvent-free powder coating resins, high-efficiency radiation-curable (UV/EB) resins, and bio-based resins derived from vegetable oils or renewable biomass. As the essential binding material in green coatings, eco-friendly coating resins serve as the technological backbone for driving the coating industry toward carbon neutrality and long-term sustainability.

In 2025, global PMMA Resin production reached approximately 800 k tons.
