An EEG device is an instrument used to record and analyze the electrical activity of the brain. It captures the electrical signals of brain neurons by placing electrodes on the scalp. These signals reflect the activity patterns of different areas of the brain and are widely used in medical diagnosis (such as epilepsy monitoring, sleep research), neuroscience research, brain-computer interface (BCI), mental health assessment and cognitive training. EEG devices can be portable, desktop or wearable, providing real-time or long-term data monitoring and analysis according to different needs.
