According to our (Global Info Research) latest study, the global EEG Biosensors market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

EEG biosensors, or electroencephalography biosensors, are devices designed to detect, record, and measure electrical activity in the brain by capturing the electrical signals generated by neurons or brain cells. EEG is a non-invasive neuroimaging technique that has been widely used in clinical medicine and neuroscience research to monitor brain function and study brain disorders. EEG biosensors typically consist of electrodes or sensors that are placed on the scalp to pick up the electrical signals produced by the brain.

There is a growing trend toward the development of wearable and portable EEG devices that are more compact, lightweight, and user-friendly. These devices offer greater convenience for ambulatory monitoring, home-based assessments, and field research.
