Abstracts

According to our (Global Info Research) latest study, the global Electric Boiler market size was valued at US\$ 12780 million in 2025 and is forecast to a readjusted size of US\$ 17215 million by 2032 with a CAGR of 5.1% during review period.

In 2025, global production of electric boilers reached 1,350,000 units, with an average selling price of USD 9,200 per unit, total production capacity of 1.6 million units, and an average gross margin of 33%.

An electric boiler is a heating system that uses electricity as its sole energy source, converting electrical energy into thermal energy through electric heating elements to produce hot water or steam. Compared with gas- or oil-fired boilers, electric boilers feature zero on-site combustion emissions, low noise, and precise temperature control. They are widely used in space heating, domestic hot water, industrial process heating, and steam supply, and are increasingly valued in the context of power grid decarbonization and emission reduction.

Upstream, electric boilers rely on key components such as electric heating elements, control modules, power semiconductors, sensors, insulation materials, and metal housings. The midstream consists of electric boiler manufacturers responsible for system integration, power configuration, safety protection, and intelligent control design. Downstream customers include residential and commercial building users, industrial enterprises, public utilities, and district heating operators, with end applications in space heating, domestic hot water, industrial heating, and steam supply.
