An electric hydraulic jack is a kind of lifting equipment that combines a hydraulic cylinder and an electric pump station. It uses an electric motor to drive a hydraulic pump to generate high-pressure hydraulic oil. The hydraulic oil enters the cylinder of the jack through pipelines, exerting pressure on the piston and causing it to move upward or downward, thus realizing the lifting and lowering of heavy objects. It has the advantages of high efficiency, large load capacity, stable operation and accurate control. It is widely used in various fields such as automobile maintenance, construction engineering, mechanical manufacturing and aerospace for tasks like lifting heavy objects, adjusting and moving equipment.
