According to our (Global Info Research) latest study, the global Electric Pill Crusher market size was valued at US\$ 125 million in 2024 and is forecast to a readjusted size of USD 191 million by 2031 with a CAGR of 6.3% during review period.

An electric pill crusher is a device designed to grind or crush pills into a fine powder, making it easier for patients who have difficulty swallowing pills to take their medication. Produces a fine and uniform powder that can be mixed with food or drinks. Saves time and effort, especially for caregivers or medical staff. Can be used for various types of medication, including tablets and pills of different sizes.

Household Crushers are usually small in size and simple to operate, suitable for home and personal use. They can be used to crush some common Chinese medicinal materials, Western medicine tablets, etc., such as Leshengtai grinder tablet powder machine. Laboratory electric crushers generally have high pulverization accuracy and adjustability, and can meet the strict requirements of scientific research experiments on drug pulverization particle size and uniformity. They are often used in drug research and development, quality inspection and other fields. Hospitals, nursing homes and private home care agencies occupy a strong position in the market because these end users have a high demand for silent tablet pulverizers. These end users account for a considerable share of revenue in the entire market. However, the continued admission of elderly patients in hospitals, coupled with the increasing incidence of non-compliance with the current medication system, will provide huge growth opportunities for crushers in outpatient hospitals and home care environments. In addition, the growing trend of home medication and the popularity of durable, lightweight and compact tablet pulverizers will promote the growth of the crusher market.
