Smart Glass, also known as switchable glass or dynamic glass, can switch between transparent and opaque states. In buildings and vehicles, it can regulate sunlight, reducing the need for artificial lighting and air conditioning. This leads to energy savings and lower carbon emissions, aligning with sustainability goals. Smart Glass offers architects and designers new possibilities for creating dynamic and visually striking spaces. It can transform from clear to opaque, providing privacy or creating unique design effects at the touch of a button. Smart Glass is ideal for creating private spaces within open-plan offices, meeting rooms, bathrooms, and residential areas. It ensures privacy when needed while maintaining an open and spacious feeling when desired. Smart Glass helps regulate daylight and glare in interior spaces, promoting occupant comfort and reducing eye strain. It can also block harmful UV radiation, protecting occupants from skin damage and reducing fading of interior furnishings.
