According to our (Global Info Research) latest study, the global Electric Vehicle Supply Equipment market size was valued at US\$ 4756 million in 2024 and is forecast to a readjusted size of USD 26630 million by 2031 with a CAGR of 28.2% during review period.

An electric vehicle charging station, also called EV charging station, electric recharging point, charging point, charge point, ECS (electronic charging station), and EVSE (electric vehicle supply equipment), is an element in an infrastructure that supplies electric energy for the recharging of plug-in electric vehicles—including electric cars, neighborhood electric vehicles and plug-in hybrids.

For charging at home or work, some EVs have onboard converters that can plug into a standard electrical outlet or a high-capacity appliance outlet. Others either require or can use a charging station that provides electrical conversion, monitoring, or safety functionality. These stations are also needed when traveling, and many support faster charging at higher voltages and currents than are available from residential EVSEs. Public charging stations are typically on-street facilities provided by electric utility companies or located at retail shopping centers, restaurants and parking places, operated by a range of private companies.

Growing sales of electric vehicles is the major factor driving electric vehicle charger market growth. Governments worldwide are pushing for adoption of electric vehicles and implementing indicatives aimed at generating awareness and offering incentives for electric vehicles to cut down automotive emissions.
