## Abstracts

According to our (Global Info Research) latest study, the global Electrical Corrosion Inhibitor Spray market size was valued at US\$ 232 million in 2025 and is forecast to a readjusted size of US\$ 374 million by 2032 with a CAGR of 5.1% during review period.

In 2025, global production of electrical corrosion inhibitor spray reached 50,000 tons, with an average selling price of USD 4,500 per ton, total production capacity of 60,000 tons, and an average gross margin of 48%.

Electrical corrosion inhibitor spray is a protective agent used to prevent electrochemical corrosion of metal electrical components, such as contacts, connectors, and circuit boards. It typically works by forming a thin film on the metal surface, isolating it from oxygen and moisture, thereby reducing corrosion. This product has excellent penetration and adhesion properties and effectively protects electronic devices and electrical connections, extending their lifespan. Electrical corrosion inhibitor sprays are widely used in industries such as electronics, automotive, and aerospace, especially for protecting equipment in harsh environments such as high humidity and salt fog.

The upstream of electrical corrosion inhibitor spray mainly includes suppliers of raw materials such as organic solvents, chemical additives, and anti-corrosion coatings, as well as manufacturers of chemical products and spray technologies. The midstream consists of companies focused on corrosion protection technology development and equipment production, responsible for product R&D, formula optimization, quality control, and manufacturing. Downstream customers primarily include electrical and electronics manufacturers, automotive manufacturers, industrial equipment companies, etc. The products are distributed through retailers, wholesalers, and direct sales

channels, and are widely used in the protection of industrial equipment, electrical devices, automobiles, and other fields.
