Abstracts

According to our (Global Info Research) latest study, the global Electronic Instantaneous Water Heaters market size was valued at US\$ 2425 million in 2024 and is forecast to a readjusted size of USD 4266 million by 2031 with a CAGR of 8.5% during review period.

Electronic Instantaneous Water Heaters heat water instantaneously without the use of a storage tank. When a hot water faucet is turned on, cold water flows through a heat exchanger in the unit, and either a natural gas burner or an electric element heats the water.

Electric tankless water heaters draw cold water directly through the pipes, rather than storing water in a tank. The water then passes through a heat exchanger in the unit, where it is heated by an electric element. This process ensures an immediate flow of hot water while also avoiding standby heat losses.
