Abstracts

According to our (Global Info Research) latest study, the global Electronic Logging Device (ELD or E-Log) market size was valued at US\$ 7120 million in 2023 and is forecast to a readjusted size of USD 9832 million by 2030 with a CAGR of 4.7% during review period.

An electronic logging device (ELD or E-Log) is a piece of electronic hardware attached to a commercial motor vehicle engine to record driving hours. The driving hours of commercial drivers (truck and bus drivers) are typically regulated by a set of rules known as the hours of service (HOS) in the United States and as drivers' working hours in Europe. The Commercial Vehicle Driver Hours of Service Regulations vary in Canada and the United States.

An ELD monitors a vehicle's engine to capture data on whether the engine is running, whether the vehicle is moving, distance driven, and duration of engine operation. One of the primary drivers of the ELD market is the regulatory mandate for fleet management in North America, particularly in the United States, as well as in some Asian countries like Japan and South Korea. These mandates require commercial vehicles to be equipped with ELDs to ensure compliance with hours-of-service (HoS) regulations.

In addition to these regions, it is expected that regulations related to ELDs will be implemented in other countries such as Russia, Brazil, and China in the coming years, due to increasing government concerns about driver and vehicle safety.

The growing need for operational efficiency in fleet-owning organizations is another crucial factor driving the ELD market. ELDs provide real-time visibility of drivers' activities, including their current cycle status, availability, and HoS, which helps fleet managers optimize their operations. ELDs also facilitate monitoring of poor driving

habits and safety issues through real-time alerts, allowing fleet managers to improve driver behavior and reduce accidents.

While the high cost of ELD systems can be a limitation for some fleet owners, the market is also witnessing the development of cost-effective solutions that offer similar functionality without compromising on quality. Telematics units are another critical component of ELDs, serving as the standard fitment and the only core component for any ELD. These units measure the performance of both the driver and the vehicle, facilitating services like calculating HoS, monitoring vehicle condition and fuel efficiency, and transmitting data through a GSM module.
