Abstracts

According to our (Global Info Research) latest study, the global Electroplating DC Rectifier market size was valued at US\$ 98 million in 2025 and is forecast to a readjusted size of US\$ 128 million by 2032 with a CAGR of 3.9% during review period.

An Electroplating DC Rectifier is an industrial power supply that converts AC (alternating current) from the electrical grid into controlled DC (direct current) used in electroplating, anodizing, electropolishing, and other electrochemical surface-treatment processes.

Its primary role is to precisely control current and voltage, which directly determines coating thickness, uniformity, adhesion, and quality.

The upstream segment consists of power-electronics components and materials suppliers, including semiconductor devices (SCRs/thyristors, IGBTs, diodes), magnetic components (transformers, inductors), passive components, cooling systems (air, water, oil), control electronics, and metal enclosures, along with raw materials such as copper, aluminum, and electrical steel. The midstream comprises electroplating DC rectifier manufacturers that design, assemble, test, and integrate complete systems—often offering digital controls, PLC/fieldbus interfaces, and customized current/voltage ratings for different plating processes. The downstream includes electroplating lines and end-users across automotive, electronics and PCB manufacturing, aerospace, machinery, hardware, jewelry, medical devices, and construction materials, as well as system integrators and plating-line OEMs that embed rectifiers into turnkey surface-finishing solutions. Overall, the market is characterized by a shift from traditional SCR rectifiers toward higher-efficiency IGBT and high-frequency rectifiers, driven by downstream

demand for better energy efficiency, tighter process control, and higher coating quality.

In 2025, global Prefabricated Pipe Rack sales volume reached approximately 142 k units, with an average global market price of around US\$ 670 per unit.
