According to our (Global Info Research) latest study, the global Elevator Smart Safety Supervision Platform market size was valued at US\$ 776 million in 2025 and is forecast to a readjusted size of US\$ 1306 million by 2032 with a CAGR of 7.8% during review period.

The elevator intelligent safety supervision platform is a digital system designed for regulatory departments, property management companies, and maintenance enterprises. It utilizes the Internet of Things (IoT), big data, video/voice communication, and emergency response coordination to monitor and manage the entire lifecycle of elevator operations online. Typically, it collects data from elevator control cabinets, car/shaft status, entrapment alarms, remote video/voice intercoms, maintenance records, and annual inspection information. This enables real-time monitoring of elevator operations within a city or industrial park, abnormal warnings, automatic dispatching of entrapment incidents, and emergency response scheduling. It also generates traceable safety files and risk maps. Furthermore, it integrates with the 12345 hotline, emergency centers, maintenance units, and property management platforms, making the entire process of 'anomaly detection—early warning push—dispatch and handling—feedback closed loop' online and transparent. This helps reduce accident rates and regulatory costs, upgrading the previously fragmented, reactive elevator safety management to a real-time, proactive, and fully traceable intelligent supervision model.
