The elevator-specific ultraviolet germicidal lamp is a disinfection device that combines ultraviolet sterilization technology with the operating characteristics of the elevator. It can automatically start when the elevator is not in use, and effectively sterilize the air, surface of objects, buttons and other easily accessible parts in the elevator car, thereby reducing the risk of cross-infection while ensuring public health safety. The elevator-specific ultraviolet germicidal lamp destroys the DNA structure of microorganisms through ultraviolet irradiation, thereby achieving the purpose of sterilization and disinfection. Most elevator-specific ultraviolet germicidal lamps are equipped with intelligent control systems, which can automatically start or shut down according to the operating status of the elevator and the use of personnel, realizing unattended automatic disinfection. Using radar sensing, infrared sensing or microwave sensing and other technologies to ensure that the ultraviolet lamp is automatically turned off when someone enters the elevator to avoid harm to the human body.
