Abstracts

Petroleum resin is a kind of oligomer with molecular weight between 300-3000. Petroleum resins are produced from petroleum based feedstock aliphatic (C5), aromatic (C9), DCPD (dicyclopentadiene) or mixtures of these. After a series of process like polymerization and distillation, petroleum resins have good performance in thermos stability and chemical stability. In addition, petroleum resins can also adjust adhesiveness.

Generally, petroleum resins are widely used in various aspects to improve people's quality of life. Petroleum resins can be used in road marking paint, which ensures safe vehicle/human traffic, adhesive tape used for office uses, adhesives, printer ink and other applications.
