Abstracts

Fatty amine is nitrogen derivatives of fatty acids, olefins, or alcohols prepared from natural sources, fats and oils, or petrochemical raw materials. Commercially available fatty amine consists of either a mixture of carbon chains or a specific chain length from C-8–C-22. Fatty amines are cationic surface-active compounds which strongly adhere to surfaces by either physical or chemical bonding. Important commercial products are prepared using fatty amines as reactive intermediates. It is widely used in water treatment, agro-chemicals, oilfield chemicals, asphalt additives, anti-caking etc.
