Abstracts

'A respirator is a device designed to protect the wearer from inhaling particulate matter, including airborne microorganisms, fumes, vapours, i.e. gases. Respirators range from relatively inexpensive single-use, disposable face masks to more robust reusable models with replaceable cartridges and are used by the military, private industry and the public.

Reusable respirators are available in both the half-face and full-face variety and can offer protection not only against airborne particulates, but gases, fumes and vapors as well. For most reusable respirators, you will need to purchase cartridges or filters to attach to the facepiece. The type of cartridges or filters you will need to purchase is dependent on the level of protection you desire.'
