To address issues such as data drift, inconsistent multi-sensor data, and monitoring blind spots and compliance risks caused by difficulties in regular maintenance of environmental monitoring systems, EMS (Environmental Monitoring System) calibration services have emerged. Since the late 20th century, with the increasing sophistication of modern industrial automation and stricter environmental regulations, this service has made significant progress in the field of metrology and quality control. It has now developed into a comprehensive technical service system encompassing on-site sensor calibration, overall system calibration, remote data verification, and the provision of supporting compliance documents. This service is widely used in industrial production emission monitoring, pharmaceutical cleanrooms, laboratory constant temperature and humidity environments, data centers, and warehousing cold chains, ensuring the accuracy and traceability of measurements of key environmental parameters such as temperature, humidity, pressure, and gas concentration. This effectively guarantees production quality, meets regulatory audit requirements, and improves the refinement and reliability of facility management.
