According to our latest research, the global EMS and ODM for Emerging Industry market size will reach USD 189880 million in 2031, growing at a CAGR of 26.5% over the analysis period.

Electronics manufacturing services (EMS) is a term used for companies that test, manufacture, distribute, and provide return/repair services for electronic components and assemblies for original equipment manufacturers (OEMs). The concept is also referred to as electronics contract manufacturing (ECM). An original design manufacturer (ODM) is a company that designs and manufactures a product as specified and eventually rebranded by another firm for sale. Such companies allow the firm that owns or licenses the Company to produce products (either as a supplement or solely) without having to engage in the organization or running of a factory.

The rise in adoption of smart home gadgets in developed economies around the world is mostly responsible for the growth. Manufacturing of radio frequency & wireless devices, optoelectronics services, and microelectronics devices for ongoing smart home trends are among the electronic manufacturing services supplied by corporations in industrialized countries. To build linked gadgets for smart homes, key leaders are inclined to integrate Artificial Intelligence (AI), cloud computing, 3D printing, and big data analysis to improve their engineering and factories. Players in the electronics manufacturing services market are extending their manufacturing locations in order to integrate new technologies and meet the industry's strong demand for smart home services. Rapid technical advancements have resulted from this rising need.
