Abstracts

According to our latest research, the global Engine PMA Parts and DER Repair market size will reach USD 5450 million in 2031, growing at a CAGR of 7.3% over the analysis period.

The PMA market (parts manufactured under an FAA-PMA approval consists of alternative manufacturers, which obtain the Parts Manufacturer Approval (PMA) and are not affiliated with any OEMs. New technologies, processes and materials allow PMA manufacturers to offer often even better alternatives which are identical in design yet substantially cheaper. DER-repairs are individual repair practices which restore a broken part or component back to the initial design requirements. All alternative repair practices are approved by a Designated Engineering Representative (DER) of the Civil Aviation Authority. PMA parts and DER repairs are effective solutions for airlines and MROs, wishing to enhance their competitiveness and performance in the modern aviation industry. Approved and certified by the FAA, EASA and a range of other CAAs, alternative parts are as reliable and airworthy as original equipment.

One area drawing significant attention is the aging of aircraft engines, prompting the need for specialized parts to maintain their reliability and safety. Depending on the engine type, comprehensive disassembly, cleaning, and servicing are mandated every 3,000 or more flight cycles. This translates to a major overhaul every five years, accompanied by more frequent, less invasive maintenance procedures. Engine manufacturers, in collaboration with regulatory agencies, have imposed strict limits on components exposed to thousands of revolutions per minute and extreme temperature changes. As these parts approach the end of their usable life, they must be systematically removed and replaced at specified intervals to uphold safety standards.
