## Abstracts

According to our (Global Info Research) latest study, the global Enhanced Expanded Graphite Yarn market size was valued at US\$ 367 million in 2025 and is forecast to a readjusted size of US\$ 466 million by 2032 with a CAGR of 3.5% during review period.

In 2025, global Enhanced Expanded Graphite Yarn production reached approximately 476,00 tons, with an average global market price of around US\$ 7.5 per kg, and a gross profit margin of approximately 10%-30%. Enhanced expanded graphite yarn is an engineered sealing yarn made from exfoliated (expanded) graphite that has been formed into a continuous, flexible yarn and then “enhanced” through reinforcement and/or functional treatments to improve strength, handling, and performance in demanding sealing duties. The base expanded graphite provides excellent heat resistance, chemical inertness, and low friction, making it suitable for high-temperature packing and gasket applications. Enhancement commonly includes adding a reinforcement carrier such as glass fiber, metal wire (e.g., stainless steel or nickel alloy), or other cores to raise tensile strength and reduce yarn breakage during braiding, installation, and dynamic service. Additional enhancements may include impregnation with PTFE, lubricants, anti-oxidation inhibitors, or corrosion-control additives to improve start-up friction behavior, reduce shaft wear, and extend service life under high PV conditions.

Upstream, the chain starts with natural or synthetic graphite feedstock, chemicals and energy for expansion/exfoliation, and auxiliary inputs such as reinforcement fibers/wires (glass, stainless/nickel alloys), PTFE/lubricant impregnants, and anti-oxidation or corrosion-inhibiting additives; midstream manufacturers then expand and process graphite into flexible strands, combine it with reinforcement cores, twist/ply the yarn to

target tex and cohesion, apply impregnation or surface treatments, and perform QA on purity (low sulfur/chloride), density, tensile behavior, and braidability; downstream, the yarn is consumed by packing and gasket producers (braided packing rings, composite packings, braided gaskets/tapes/ropes) and ultimately by end users in oil & gas/refining, chemicals, power and boilers, pulp & paper, metals, marine, and general industrial pumps/valves and rotating equipment, where procurement is driven by temperature/chemical resistance, leakage control, shaft-sleeve wear risk, and maintenance interval requirements.
