Abstracts

According to our (Global Info Research) latest study, the global EPA and DHA Formula market size was valued at US\$ 3571 million in 2023 and is forecast to a readjusted size of USD 5892 million by 2030 with a CAGR of 7.4% during review period.

EPA (Eicosapentaenoic Acid) and DHA (Docosahexaenoic Acid) are two important omega-3 polyunsaturated fatty acids, mainly found in marine organisms (such as fish) and some algae. They play a vital role in human health, especially in cardiovascular health, brain function and anti-inflammation. EPA and DHA formula usually refers to dietary supplements or products containing EPA and DHA, which are generally derived from fish oil, algae oil or other oils rich in omega-3.

The EPA (eicosapentaenoic acid) and DHA (docosahexaenoic acid) formula market is experiencing robust growth, driven by increasing consumer awareness of the health benefits associated with omega-3 fatty acids, including cardiovascular, cognitive, and anti-inflammatory support. Demand is fueled by a growing focus on preventive healthcare, rising cases of chronic diseases, and expanding applications in dietary supplements, functional foods, pharmaceuticals, and infant nutrition. Plant-based and algal-derived sources are gaining traction alongside traditional fish oil formulations, catering to vegetarians, vegans, and sustainability-conscious consumers. North America and Europe dominate the market due to high health awareness and established dietary supplement industries, while the Asia-Pacific region presents significant growth opportunities due to rising disposable incomes and nutritional education. Manufacturers are focusing on product innovation, purity standards, and sustainability to meet regulatory requirements and evolving consumer preferences.
