According to our (Global Info Research) latest study, the global Epitope Mapping Service market size was valued at US\$ 502 million in 2024 and is forecast to a readjusted size of USD 771 million by 2031 with a CAGR of 6.4% during review period.

Epitope mapping service is a process that uses a variety of bioinformatics tools, experimental techniques and computational methods to determine the specific area of ??interaction between antibodies and their antigens, namely the epitope. This service is essential for understanding the mechanism of immune response and developing new vaccines and therapeutic antibody drugs. By accurately identifying the location of linear or conformational epitopes, researchers can optimize antibody design, improve its specificity and affinity, and provide key data support for personalized medicine. In addition, epitope mapping can also help reveal the strategies of pathogens to evade the immune system and promote the development of more effective prevention and treatment methods.
