## Abstracts

Aroma chemicals are compounds which consist of smell and odor. Aroma chemicals are an important group of organic molecules used as ingredients in Aroma Chemicals compositions. There are plenty of different molecules which use in production of Aroma Chemicals compositions, of which synthetic ingredients play a major part as components due to their current availability and relatively lower cost as compared with natural molecules. They are also known as aroma, fragrance and odorant among others. Any chemical compound is said to have odor or smell only if it is sufficiently volatile to reach the olfactory system in the upper part of the nose.
