Abstracts

Automotive coolant, also known as antifreeze, is a liquid substance that circulates through an internal combustion engine and draws off excessive heat. The two most common chemicals used for this are ethylene and propylene glycol, both of which have lower freezing points than water (32° Fahrenheit or 0° Celsius). This allows the chemicals to flow freely even under cold winter conditions. Automotive Coolant also has a higher boiling point than pure water, which makes it ideal for summer use as well.
