Abstracts

Cross-laminated timber (CLT) is an engineered wood product that is rapidly gaining popularity in Europe Others and Austria as a sustainable alternative to concrete and steel construction in commercial and multi-residential applications. The system consists of multilayer panels made from solid wood boards stacked crosswise and glued together. The cross-laminated configuration improves rigidity, dimensional stability, and mechanical properties. Structurally, CLT offers performance comparable to concrete or steel, with panels suitable for use as walls, floors, and roofs and other applications.
