Abstracts

Fittings for Gas & Water Transmission Systems is a system which including gas transmission system fittings and water transmission system fittings. Gas and water transmission systems are associated with different components including piping accessories, valves and flow measuring instruments and other components, which is a very large and complex parts system.

During the conveying process, special piping accessories are needed to branch the fluid, change the direction, change the pipe diameter and avoid the obstruction. At the same time, the valve is an important control system in the conveying system, used to cut off and connect the pipeline, and adjust the fluid pressure and flow. In addition, the flow meter includes a flow meter and a pressure gauge to monitor the flow and pressure of the fluid.
