Abstracts

A hookah is a smoking device with a single or multi-stemmed instrument for vaporizing and smoking flavored tobacco, called shisha, whose vapor or smoke is passed through a water basin—often glass-based—before inhalation. There are two kinds of hookahs: the traditional ones that you see in hookah bars and newer hookah pens (e-hookahs).

Health risks of smoking hookah include exposure to toxic chemicals that are not filtered out by the water and risk of infectious disease when hookahs are shared.
