Abstracts

A microscope slide is a thin flat piece of glass used to hold objects for examination under a microscope, typically 75 by 26 mm (3 by 1 inches) and about 1 mm thick. Typically the object is placed or secured ('mounted') on the slide, and then both are inserted together in the microscope for viewing. This arrangement allows several slide-mounted objects to be quickly inserted and removed from the microscope, labeled, transported, and stored in appropriate slide cases or folders.
