Abstracts

'Seamless Copper Tubes actually mean a non- welded Copper Tubes, (the word tube says that it has a central cavity, means hole) this means there would no scars or marks on the surface of the tubes.

Seamless copper tubess are of the same type, initially copper billets are produced by extruding the raw copper and after obtaining the cylindrical copper billet of required dimensions it is transferred to Mannesmann Mill (famous for extruding seamless tubess), where the central cavity is initially made by piercing, and then drawing it (with a mandrel attached), into a long tubular copper.'
