## Abstracts

Tissue Engineering is a process involving in-vitro development of tissues or organs. It is done to replace or support the function of defective or injured body part. Tissue engineering involves the application of biology and engineering for innovation of tissue substitutes that can maintain, restore and improve the function of ruptured human tissue. Products developed by this procedure are efficient and durable. Tissue engineering is gaining its popularity in various areas such as burn treatment or wound care, neurology products, orthopedics, urological products and others. On the basis of type of material used, tissue engineering and regeneration market can be segmented into synthetic, genetically modified and biological materials.
