## Abstracts

According to our (Global Info Research) latest study, the global Exosome Centrifuge market size was valued at US\$ 442 million in 2025 and is forecast to a readjusted size of US\$ 598 million by 2032 with a CAGR of 4.4% during review period.

In 2025, global exosome centrifuge production reached approximately 15357 unit, the average price is 28000 usd/unit. An exosome centrifuge is a special type of centrifuge designed to isolate and purify exosomes from biological samples such as blood, urine, cell culture supernatant, etc. The need for 'special design' is mainly due to the fact that exosomes are extremely small (usually between 30 and 150 nanometers in diameter) and require extremely high purity for subsequent research.

The gross profit margin of exosome centrifuges is around 28%.
