## Abstracts

According to our (Global Info Research) latest study, the global Fall Intelligent Monitoring Alarm System market size was valued at US\$ 436 million in 2024 and is forecast to a readjusted size of USD 654 million by 2031 with a CAGR of 6.0% during review period.

According to the survey and statistics of the company's 'Semiconductor Research Center', the global sales of semiconductor manufacturing equipment will reach US\$109 billion in 2022, reaching a record high, an increase of 5.6% from US\$103.2 billion in 2021. In recent years, the localization process of China's semiconductor industry has further accelerated, and the performance of semiconductor equipment is more flexible than the overall industry. The localization of semiconductor equipment welcomes the golden wave, and domestic semiconductor equipment is ushering in more opportunities for verification trials, technical cooperation, and import substitution. In 2022, China remained the largest market for semiconductor equipment for the third consecutive year, although the pace of investment in the region slowed by 5% year-on-year, accounting for \$28.3 billion. Global sales of semiconductor manufacturing equipment hit a record high in 2022, driven by the industry's efforts to increase fab capacity needed to support long-term growth and innovation in key end markets including high-performance computing and automotive. In addition, the findings reflect investment and determination across regions to avoid future semiconductor supply chain constraints, such as those seen during the pandemic. In 2022, global sales of wafer processing equipment will increase by 8%, while sales of other front-end sectors will increase by 11%. After strong growth in 2021, assembly and packaging equipment sales fell 19% last year, while total test equipment sales fell 4% year-over-year.
