According to our (Global Info Research) latest study, the global FEA Analysis Software market size was valued at US\$ 373 million in 2024 and is forecast to a readjusted size of USD 523 million by 2031 with a CAGR of 4.6% during review period.

FEA Analysis Software (Finite Element Analysis Software) is a professional tool that simulates and analyzes engineering structures and physical phenomena through numerical calculation methods. Finite Element Analysis (FEA) decomposes complex physical problems into small discrete units, and simulates the performance of materials and structures under various physical conditions such as external forces, heat, vibration, and electromagnetic fields through mathematical models and numerical methods. FEA software provides an intuitive modeling interface and powerful solving capabilities. It can analyze various geometric shapes and material properties, generate stress distribution, displacement field, deformation mode and other results, thereby helping engineers predict structural performance, optimize product design, verify experimental data and reduce development costs during the design stage.
