Abstracts

According to our (Global Info Research) latest study, the global Feed Prebiotics market size was valued at US\$ 29.4 million in 2024 and is forecast to a readjusted size of USD 40.3 million by 2031 with a CAGR of 4.7% during review period.

Prebiotics in Animal Feed has been shown to benefit digestion, animal performance and the immune system. The microbe population of the rumen must be healthy and in appropriate numbers/balance for proper digestion of feed, and health of the animal.

Prebiotics are fibers which cannot be absorbed or broken down by the body and therefore serve as a great food source for probiotics, in particular the Bifidobacteria genus, to increase in numbers. Prebiotics by nature do not stimulate the growth of bad bacteria or other pathogens; the official definition of prebiotics is: 'non-digestible food ingredients that beneficially affect the host by selectively stimulating the growth and/or activity of one or a limited number of bacteria in the colon, which can improve host health.'

Prebiotics and probiotics are easily confused. Not only are the names similar, but they are both related to the good bacteria we all need to maintain good digestive health. However, that's where the similarity ends.

Beneo, Baolingbao, Sensus, Meiji, Hayashiabara, Longlive and Nikon Shikuhin KaKo are major players in the global market. In 2019, Beneo is a global market leader with a global market share of 18%.
