Abstracts

According to our (Global Info Research) latest study, the global Ferrous Sulfate for Agriculture market size was valued at US\$ 23 million in 2023 and is forecast to a readjusted size of USD 33.1 million by 2030 with a CAGR of 4.5% during review period.

Ferrous sulfate is widely used in agriculture as a micronutrient to treat iron deficiencies in soils. It is especially useful in the treatment of chlorosis, a condition in plants caused by a lack of iron, and it is applied to soils or directly to plants as a foliar spray.

Increasing Demand for Fertilizers:

As the global population grows and the demand for food increases, the use of ferrous sulfate as a soil amendment and fertilizer is rising, especially in regions with iron-deficient soils.

Sustainable Agriculture Practices:

Ferrous sulfate is a relatively environmentally friendly option for correcting iron deficiencies in crops, driving its adoption in sustainable farming systems.

Rising Organic Farming Trends:

With the shift towards organic farming, the demand for natural soil amendments like ferrous sulfate is growing, as it helps improve plant health without introducing harmful chemicals.

Competition from Alternative Micronutrients:

There are various other micronutrients and fertilizers available that can address iron deficiencies in soils, which could limit the growth of ferrous sulfate usage in some regions.

Advances in Fertilizer Technology:

The development of new formulations and delivery methods for agricultural products is expected to enhance the efficiency of ferrous sulfate use, driving greater market

penetration.
