According to our (Global Info Research) latest study, the global FeSi Powder Core market size was valued at US\$ 237 million in 2024 and is forecast to a readjusted size of USD 718 million by 2031 with a CAGR of 17.4% during review period.

FeSi powder core is made of 6% Si and 94% Fe alloy powder. It is a veritable high-temperature material. There is no thermal aging problem. The core loss is more than 50 lower than that of iron powder core, and it has excellent DC bias performance, has good temperature stability and high energy storage capacity.

Metal soft magnetic powder core is a composite soft magnetic material made by mixing powder made of metal or alloy soft magnetic materials with insulating additives through a special process. According to the composition of raw materials, metal soft magnetic powder cores can be divided into iron powder cores, iron-silicon-aluminum magnetic powder cores, high-flux magnetic powder cores, molybdenum permalloy magnetic powder cores, amorphous and nanocrystalline magnetic powder cores, etc. Metal soft magnetic powder core has the advantages of both metal and alloy soft magnetic materials. It has multiple advantages such as low loss, high effective magnetic permeability, good stability, controllable performance, and high magnetic induction intensity. In addition, metal soft magnetic powder core can also be used with alloy soft magnetic materials. Disadvantages of large eddy current losses at high frequencies. Based on its good performance, metal soft magnetic powder core has broad application prospects in energy storage, automobiles, 5G, power supply, radar, servers and other fields. In recent years, with the advancement of electronic and communication technologies, the market demand for metal soft magnetic powder cores has been continuously released. According to research, the global metal soft magnetic powder

core market will reach 3.72 billion yuan in 2022. Globally, the Asia-Pacific region occupies the largest market share.
