According to our (Global Info Research) latest study, the global Fiber Launch System market size was valued at US\$ 643 million in 2024 and is forecast to a readjusted size of USD 1004 million by 2031 with a CAGR of 6.6% during review period.

Essentially, a fiber launch system (also called fiber coupling stage) consists of a focusing lens in conjunction with optical-mechanical elements for fixing either a bare fiber end or a fiber connector containing the fiber (e.g. a FC/PC connector). In addition, it has controls for fine adjustment of the input beam and/or the focusing lens.

At present, the global communications industry is developing rapidly, with new technology highlights such as meta-universe, 5G, cloud technology application, artificial intelligence and big data, etc., which have become the main driving force for the rapid updating and iteration of the communications industry. From the perspective of competition, the industry concentration of each segment of the global communications industry is relatively high at present, and the leading companies are mainly concentrated in China and the United States. And as the R&D investment of the leading companies increases, and the related technology development becomes more and more mature, the healthy competition and cooperation among the enterprises is expected to boost the scale of the global communications industry to further increase. According to our research, the global communications industry market size in 2022 will be about 286.1 billion U.S. dollars.
