Abstracts

According to our (Global Info Research) latest study, the global FibroScan market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

FibroScan is one of the most well-known non-invasive devices for assessing liver fibrosis. It uses transient elastography to measure liver stiffness, which correlates with the degree of fibrosis. The device emits a painless vibration, and the speed of the shear wave passing through the liver tissue is measured. A higher speed indicates stiffer tissue, which suggests more severe fibrosis.

FibroScan has patents in major countries/regions around the world, including the United States, Europe, and China. In China, there are several generic products, including Wuxi Hisky Med, Eieling Technology, and Mindray. In Europe and United States, FibroScan is an exclusive product with a patent valid until 2039. In addition to patent protection, the American Association for the Study of the Liver and the European Association for the Study of the Liver have designated Echosens as the manufacturer in their guidelines. Therefore, we believe that in the next 15 years or even longer, it is unlikely that FibroScan will have competitors in Europe and the United States.
