## Abstracts

According to our (Global Info Research) latest study, the global Financial IC Security Chip market size was valued at US\$ 1574 million in 2024 and is forecast to a readjusted size of USD 2059 million by 2031 with a CAGR of 5.0% during review period.

Financial IC security chip, also known as chip bank card, is a bank card with IC chip issued by the bank and in compliance with the PBOC2.0 standard of the People's Bank of China. This chip can store information such as keys, digital certificates, fingerprints, etc., and has the characteristics of high security, not easy to copy, and large capacity. Compared with traditional magnetic stripe cards, financial IC cards use chips for data storage and encryption and decryption, effectively preventing information from being copied and tampered with, and eliminating 'cloning cards', which fundamentally improves the security of bank cards. Financial IC security chip is a technology widely used in the financial industry, aiming to improve the security and convenience of financial instruments such as bank cards.
