Abstracts

According to our (Global Info Research) latest study, the global First Aid Plaster Cast market size was valued at US\$ 319 million in 2025 and is forecast to a readjusted size of US\$ 446 million by 2032 with a CAGR of 5.0% during review period.

Emergency plaster casts are medical materials used for temporary or long-term external fixation after fractures or joint injuries. They mainly include traditional plaster casts, fiberglass casts, and synthetic resin (such as polyurethane) casts. They are characterized by high plasticity, stable support after hardening, and good breathability, and are widely used in pre-hospital emergency care, orthopedic clinics, and rehabilitation settings. The upstream of the industry chain includes raw material suppliers such as plaster powder, fiberglass yarn, polyurethane prepreg, non-woven fabric substrates, and waterproof coatings. The midstream consists of medical device manufacturers, which must possess Class II medical device production qualifications and CE/FDA certification. The downstream covers hospitals, emergency centers, pharmacies, e-commerce platforms, and military and police emergency systems. Due to low raw material costs and mature large-scale production, the industry's overall gross profit margin is between 30% and 45%. In 2024, the global production of emergency plaster casts was approximately 163 million pieces, with an average price of approximately US\$1.9 per piece. Global production capacity in 2024 was approximately 200 million pieces.
