According to our (Global Info Research) latest study, the global Flat Bottom Drills market size was valued at US\$ 386 million in 2024 and is forecast to a readjusted size of USD 493 million by 2031 with a CAGR of 3.5% during review period.

Flat Bottom Drills are cutting tools designed for specific drilling applications, featuring a flat bottom at the end of the drill, suitable for making precise holes in a variety of materials. This design avoids the deflection or jitter caused by conventional tip drills when contacting the surface, allowing it to work efficiently on uneven surfaces, at staggered angles or thin-walled materials. Flat bottom drills are usually made of high-performance materials such as high-speed steel (HSS) or carbide, and are coated to improve wear resistance and cutting performance.
