According to our (Global Info Research) latest study, the global Flexible Laminated Busbar market size was valued at US\$ 256 million in 2024 and is forecast to a readjusted size of USD 441 million by 2031 with a CAGR of 8.4% during review period.

Stacked Insulated Flexible Busbar is a flexible conductive material used for current transmission in power systems, with good conductivity, insulation and mechanical flexibility. It is composed of multiple layers of conductive sheets (usually copper or aluminum materials) stacked together, and each layer of conductive sheets is isolated by a layer of insulating material. The stacked design makes the busbar more flexible and has a stronger load capacity. It is widely used in electrical equipment, especially in environments with high space requirements and frequent wiring adjustments.
