The Flexible Laryngeal Mask Airway (LMA) is a medical device used to secure a patient's airway during anesthesia or emergency situations. It is designed to maintain an open airway by sealing around the laryngeal inlet, allowing for effective ventilation and protection of the airway from aspiration. The flexible LMA features a soft, inflatable cuff that molds to the contours of the larynx and pharynx, which enhances its ability to adapt to varying anatomical structures and provides a snug fit. This flexibility makes it particularly useful in challenging clinical scenarios, such as in patients with difficult airway anatomy or in emergency settings where rapid airway management is crucial.
