According to our (Global Info Research) latest study, the global Floor-standing Surgical Sponge Counting Detection System market size was valued at US\$ 50.3 million in 2024 and is forecast to a readjusted size of USD 61.7 million by 2031 with a CAGR of 3.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Floor-standing surgical sponge counting and detection systems are specialized technologies designed to improve surgical safety by preventing retained surgical objects (RSIs), especially sponges, from being left in the patient's body after surgery. These systems are critical because retained sponges can lead to serious complications such as infection, additional surgeries, and legal issues. Traditional manual counting methods are prone to human error, which is why automated or semi-automated detection systems are becoming increasingly popular in healthcare settings.
